EDUCATION

University of Washington - Seattle

Bachelor's of Science in Computer Science

Relevant Coursework: Database Systems, Data Visualization, Differential Equations

Seattle, WA

Expected December 2027

South Puget Sound Community College

Associate's in Computer Science

Relevant Coursework: SQL Fundamentals, Object Oriented Programming, Calculus

Olympia, WA

Sep. 2023 – June 2025

EXPERIENCE

The Boring Club at UW

Web Developer

- Engineered and deployed front-end updates using HTML, CSS, and JavaScript to enhance user experience and site functionality.
- Streamlined the development workflow by managing feature requests, bug tracking, and content updates through GitHub Issues.

Seattle, WA

February 2026 - Present

Data Scientist

- Investigated practical computer vision pipelines applicable to the club's live camera data.
- Researched OpenCV methods for real-time video preprocessing and noise reduction to improve camera quality.

September 2025 - Present

First Step Org

Founder

- Founded and led a nonprofit expanding student access to FIRST Lego League programs through mentorship, fundraising, and resource coordination.
- Recruited and organized student volunteers for outreach events, increasing youth participation in local STEM and robotics activities.
- Coordinated events, logistics, and partnerships that supported community robotics engagement and contributed to the FRC team earning the **Impact Award** in 2024 and the **Engineering Inspiration Award** in 2025.

Olympia, WA

June 2023 - Present

Olympia Robotics Federation - FRC TEAM 4450

Team Captain

- Led a **35+ member** team through district qualification and championship competition, overseeing preparation, coordination, and match readiness.
- Restructured sub-team leadership and ran rookie workshops that enabled robot design to be completed 2 weeks earlier than prior seasons, improving build readiness and team coordination.
- Managed travel, scheduling, and communication logistics across regional, district, and world events to ensure smooth team operations under competition timelines.

Olympia, WA

June 2024 - June 2025

Control Systems Programmer

- Led programming for USS Leviathan in the FIRST Robotics Competition Reefscape season, building the control system used in competition matches (see [Project](#)).
- Worked across mechanical and electrical subteams to integrate software with hardware, reducing match-time failures and improving robot reliability in competition.
- Designed a Java state-machine architecture coordinating 10+ motors, 8 pneumatic pistons, and 6 sensors, enabling reliable autonomous and teleop performance across 7 competitions.

February 2024 - August 2025

Lead Electrical Engineer

- Designed and wired the drivetrain and subsystem electrical layout for *USS ProtoStar* and *USS Leviathan*, and configured motor controllers to integrate with the control system, delivering consistent performance across **7 competitions (84+ matches)** with just **1 electrical issue** across 2 seasons.
- The electrical reliability contributed to the team placing **3rd at District Championships** and performing in the **top 25% of teams** at the **FIRST World Championship**.
- Standardized wiring layouts and documentation, reducing electrical troubleshooting by 10–15 minutes per incident and improving robot uptime during events.

May 2023 - June 2024

PROJECTS

USS Leviathan Control System | *Java*

- Implemented computer vision, control systems, and data logging, enhancing robot performance and adaptability.
- Improved 3D robot positioning using visual-inertial odometry with an Oculus headset during the post-season.
- Debugged and integrated software, electrical, and mechanical systems to ensure competition readiness.

Jan 2025 – August 2025

Employee Management System | *SQL*

- Designed a relational database for employee, department, and role data, improving record organization.
- Created SQL queries to analyze salaries, department averages, and reporting hierarchies, including subqueries for employee qualifications.

Feb 2025 - March 2025

TECHNICAL SKILLS

Languages: Java, Python, R, SQL, HTML/CSS, JavaScript

Certification: AWS Academy Graduate - Data Engineering

Tools: Git, Pandas, NumPy, SQLite, Tableau, ggplot2, p5.js, Observable
